

We got SAP® Certified once again!

SAP UCC TU Munich certifies in Hosting, SAP HANA, and Cloud and Infrastructure Operations

We are pleased to inform you that the SAP UCC Munich at the Technical University of Munich has successfully passed the audit within the SAP Partner Certification Program in October 2021.

We are thus once again a

- SAP-certified provider of Cloud and Infrastructure Operations,
- SAP-certified provider of Hosting Operations, and
- SAP-certified provider of SAP HANA Operations

The [Partner Certification Program](#) is aimed at SAP hosting providers and ensures that the customer environments and the associated processes to manage these landscapes meet the highest level of quality. To this end, partners undergo a comprehensive [audit program](#) every two years, which not only examines the IT service management processes but the infrastructure and customer landscapes as well.

Within the scope of the audit, SAP especially praised our project, quality and knowledge management (excellent), as well as our extensive portfolio of hosting services (very good). We thus have passed another important milestone in the continuous improvement and professionalization of our hosting services and are proud to have been a certified SAP hosting provider for almost 10 years now (03/2014 – 10/2023).

For our partners as part of the SAP University Alliance program, this means that they can continue to rely on our excellently managed SAP cloud services, that are based on our high-performing and stable IBM Power infrastructure.

We would like to thank everyone who contributed to the success of the certification.

Your SAP UCC TU Munich
