

Services for teaching, research and co-innovation

SAP University Alliances is a global program that provides more than 3,000 universities with free SAP software licenses for academic purposes. Within this program the SAP University Competence Centers (UCC) host SAP solutions for teaching, research and co-innovation.

In addition, UCCs develop and manage academic teaching materials to assist lecturers and researchers. While UCCs assure 24/7 availability of complex system landscapes and support users closely, faculty members can fully concentrate on their core competencies: teaching and research.

By using our scenario-based and practical curricula on latest SAP solutions, lecturers and students can reach their full potential. Our comprehensive teaching materials consist of presentations, case studies and hands-on exercises. Additional teaching tools facilitate continuous student assessments and foster group discussions.

Our experts can support you through all phases.

What is TS410

T = Training

S4 = SAP S/4HANA

10 = ten days

TS410 is an official SAP Education certification course based on the SAP S/4HANA solution. It serves as an introduction to SAP's latest business software and prepares students for the subsequent SAP certification. With this SAP certificate, future graduates will have better chances on the job market.

Prerequisites to use TS410 in your teaching

To offer this course at your institution, you must be officially TS410 certified. To prepare for this, a 3-day intensive course followed by self-study is usually sufficient if you have the appropriate prior knowledge. Afterwards, you take the online exam.

For students, we recommend the 10-day intensive course, which covers all modules comprehensively. The online exam is conducted by SAP Education afterwards. After passing the exam, course participants receive the official SAP certificate, which is also the basis for further qualifications and can be officially used, for example in job applications.

Modules

In total, twelve modules introduce different business areas. In addition to the theoretical teaching of the content, practical application examples are carried out with SAP Fiori Apps or via the SAP GUI. Students gain an understanding of tasks and processes within and across different areas in a company.
